Stakeholder Map · Revision 8254

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia's role is to supervise how the QA cells are being used, but the operator is responsible for the tangible operation, performance, and recording of the systems inside the QA cell. The operator's account would be useful in the proposed review meeting. [W03-S01]

The appropriate night-shift operator still needs to be identified and interviewed in order to provide the details of the night of the incident and describe the details that Nia did not see. [Nia, Nightshift Supervisor - Inteverview]

Engineering

Elias has the technical expertise to interpret and explain the data from command and scheduler records. To help find the origin of the rogue command, he still needs access to Read-Only exports of the records with the source details. He needs to have a short discussion with the record custodian about accessing the records before committing to a delivery date. He can help propose technical solutions, but does not have the authority to guarantee access to the records or approve spending [W03-S02]

Elias needs to know if he can access the specific records needed to find the missing source information.

Operations

Mara routes the analyst's compiled information and recommendation to the authorizing sponsor. She can seek out the missing contact information for the people needed in review. She cannot approve any spending. [W03-S04]

While Mara may acquire the contact information of proposed participants, each contact must confirm their availability and acceptance of participation responsibilities.

Sponsor and record custodian

The role of the authorization sponsor comes with power to authorize the proposed work of the QA review recommendation as long as it works within the organization's approval process. At this time, there is currently no clear contact for the person designated as the authorization sponsor; no clear enumeration of the organization's approval process; and no documents of any signed work approvals [W03-S03]

The record-custodian is identified as a necessary role but is missing the contact information of the designated person.
[W03-S03]

2. Relationships and next steps

Competing needs and tradeoff

The current review plan requires that participants work around their scheduled shift duties. The Operations department is typically scheduled during the day, but we need a night-shift operator present because the incident in review occurred during the night-shift. There is no current indication of overlap between shift schedules to ensure that both departments can participate in the review meeting. [W03-S01]

The current proposed meeting is scheduled for the daytime, which will hinder the in-person participation of the QA night-shift operator who could provide supplemental details from the Nia's account on the night of the incident. [W03-S-04]

At this time, we do not have evidence that all participating parties are available for the day-time meeting. In the absence of a mutually available meeting time, it may be helpful to have the QA night-shift operator create a document reporting his account of the night's events on the day of the incident. It may be further helpful if Operations coordinates the questions they may have with Nia, so that she may acquire the information from the night-shift operator.

Consultation plan

The operator can provide the most details about the workflow inside the QA cell. Check shift availability for review meeting participation.

The record custodian needs to find the records and deliver them in the appropriate format for review. Confirm availability to discuss access with Elias.

Missing voices and validation

How can the review meeting accommodate the nigh-shift operator's scheduled hours? (Nia must coordinate)

Who is the designated record-custodian available and can they be contacted to discuss record access and delivery with Elias? (Mara must coordinate))

Who is the authorizing sponsor and what are the limits of the roles authorization powers? (Mara must coordinate)

Next step toward requirements

Mara must acquire the missing contact information for the record-custodian, authorizing sponsor, and night-shift operator.
W03-S03 named the roles needed for the review meeting, but the availability and intent of attendance of the people in the entry must be confirmed.

This map identifies the relationship of roles in the system:
Operations can coordinate between departments. The operator and record-custodian can provide the relevant information that will be reviewed. The QA supervisor and the Engineering department can interpret the information from the provided records. The Analyst can summarize the information into a recommendation. Ultimately, the Authorizing Sponsor, can approve projects.

3. Book evidence connection

Book form connection

Preplanning questions that reveal the relationships between the roles and the QA cell operations helps keep the review focused only on relevant solutions.
