CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Validated Requirements Set · Revision 6829

R-01 · functional

Requirement: The system must use language that distinguishes between the state of a visitor's confirmed appointment time slot and a the state of a visitor's reception upon arrival.

Source: W04-S01 · Dana Ruiz

Rationale: A confirmed schedule appointment slot is not a confirmation that the visitor has arrived or has been seen.

Acceptance check: Dana, the intake coordinator, can keep a separate log from scheduling to record the status of present visitors.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held will refer to a slot that still needs confirmation in scheduling. Ready will refer to the status of a visitor that has arrived but is waiting on the next approved step.

R-02 · user

Requirement: Authorized staff must be able to distinguish between a reserved appointment slot and a waiting visitor that has arrived for their appointment.

Source: W04-S01 · Dana Ruiz

Rationale: Service may be delayed or denied for a visitor if the proper follow-up steps are not established for the appropriate status of the time slot.

Acceptance check: Given that Scheduling is concerned with the state of a time slot and Intake is concerned with the state of a visitor, the intake Coordinator can conduct a status inquiry through scheduling first and then follow up with directions based on the intake workflow.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held will refer to a slot that still needs confirmation in scheduling. Ready will refer to the status of a visitor that has arrived but is waiting on the next approved step.

R-03 · nonfunctional

Requirement: Both a room and a qualified technician must be confirmed as available before same-day slot can be offered to a visitor.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Though a visitor may be present, that is not a guarantee that that there is room or a qualified technician to tend to the visitor.

Acceptance check: Given that intake cannot validate clinical capacity, when a visitor asks for a same-day slot then the intake desk should confirm availability with Dr. Lena Okafor in Clinical Operations.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: Both a room and a qualified technician must be available to confirm clinical readiness for a patient.

R-04 · functional

Requirement: Clinical Operations must be informed of changes in the state of appointment slots to reapportion rooms and technicians as needed.

Source: W04-S02 · Dr. Lena Okafor

Rationale: There will be less delay when coordinating and validating clinical availability.

Acceptance check: Scheduling can forward a live log of confirmed appointment slots for Clinical Operations to access.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: Both a room and a qualified technician must be available to confirm clinical readiness for a patient.

R-05 · functional

Requirement: Authorized staff must be able to see a visitor's language, communication, and approved support needs throughout the confirmation, rescheduling, and check-in processes.

Source: W04-S03 · Priya Shah

Rationale: For the best quality of service, the visitor should not have to repeat themselves at each stage of their visit; reduces the possibility of delays because staff will have the right preparation and accommodations for the visitor.

Acceptance check: Priya Shah, the Patient Access Coordinator, can share notes about validated patient access with the scheduling and intake departments.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: A shared database can be accessed via role-assigned user accounts that notes what supports need to be arranged for a patient.

R-06 · nonfunctional

Requirement: The Patient Access coordinating system must offer alternatives to the digital access portal such as phone or staff-assisted coordinating services.

Source: W04-S03 · Priya Shah

Rationale: There may be a wide range of patient needs. Since this department is meant to help provide patients with the proper accommodations, it makes sense to provide more than one limited access channel.

Acceptance check: Patients will have a smooth experience at all steps of the appointment process.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: A shared database can be accessed via role-assigned user accounts that notes what supports need to be arranged for a patient.

R-07 · nonfunctional

Requirement: Minimal relevant information must be readily available for the appropriate roles at the appropriate authorization level.

Source: W04-S04 · Jordan Kim

Rationale: In order to ensure the privacy of patient records only the minimal information must be shared for appropriate authorized staff and the respective decisions that their role must make. Since the status of appointments may change, status information must be updated in real time.

Acceptance check: Role-based authorization and authentication accounts can ensure the information gets shared with the appropriate staff.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: The role-based access user accounts will provide only role-relevant access and user accountability in case of audit.

R-08 · functional

Requirement: The system must preserve a log of status-change history including the name of the editor, the previous value of the status, the new value of the status, and the edit time.

Source: W04-S04 · Jordan Kim

Rationale: The log's will provide a trail to follow in the case of an audit or exception review; this will reinforce accountability.

Acceptance check: Staff can log into role-assigned user accounts that identify them in their interactions with the system records.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: The role-based access user accounts will provide only role-relevant access and user accountability in case of audit.

Professional Guidance Assessment

IIBA: IIBA is a professional association that gives us the broad analyst process.

ISO/IEC/IEEE 29148: ISO, IEC, and IEEE jointly publish ISO/IEC/IEEE 29148 specifies the required processes implemented in the engineering activities that result in requirements for systems and software products (including services) throughout the life cycle; provides guidelines for applying the requirements and requirements-related processes described in ISO/IEC/IEEE 15288 and ISO/IEC/IEEE 12207; specifies the required information items produced through the implementation of the requirements processes; specifies the required contents of the required information items; and provides guidelines for the format of the required and related information items.

PMI: PMI focuses on project delivery, but Week 4 focuses on first setting the checkable requirements or expectations of what a system must do.

Application: The guidance helped me make R-08 clearer.

Prepared in Command Nexus. Canvas remains the official submission point.
